2cSNA[©]

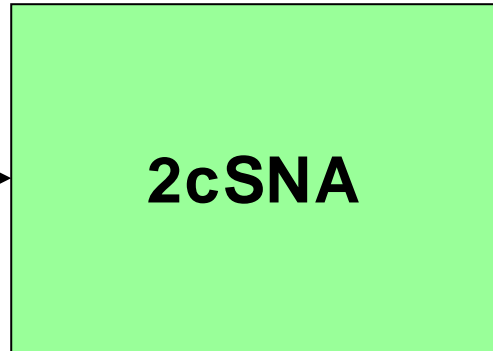

VTAM

Your focus is moving towards newer network technologies, such as IP, and that's where you're spending most of your time?

You don't want to spend big bucks on control and monitoring tools for legacy application networking?

Session Data

Trace Data

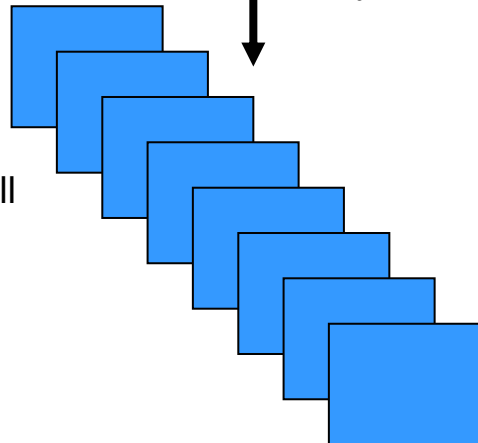

2cSNA

Command Facility

You need information on current connections?
You want historical information on connection failures?

Controlling your SNA network is still part of your duties?
Got to issue lots of display commands?
Need access to many systems simultaneously?

z/OS Development / Distribution / Training / Outtasking

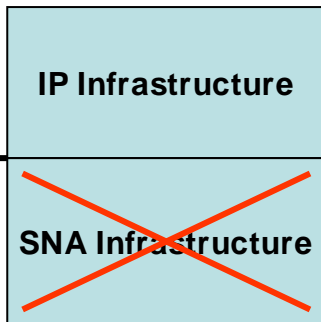

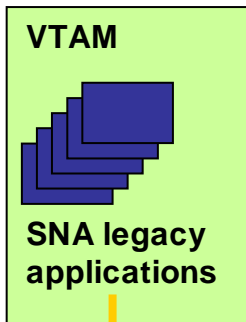

Giving legacy a second chance

AnSynova GmbH

New!

2cSNA®

Getting rid of all those NCPs?
 No longer using any Cluster Controllers?
 Doing your response time monitoring on IP?
 Looking for a new approach?

Feature	2cSNA	Tool #1	Tool #2
	YES	<i>YES</i>	<i>YES</i>
NICF <i>Network Interrogation and Control Facility</i>	YES	YES	YES
SSHf <i>Session Status and History Facility</i>	YES	PARTLY	YES
SSTF <i>Session Setup and Termination Trace Facility</i>	YES	NO	YES

You do not need these features anymore?

The solution for you:

2cSNA

- NICF** *Network Interrogation and Control Facility*
- SSHf** *Session Status and History Facility*
- SSTF** *Session Setup and Termination Trace Facility*

↑
 You pay for what you get: **Less!**
 But less is what you need.
